

Anago /anargo/...Ancient Greek word describing the concept of leading people upward and onward to a better place.

Our goal is to provide services and products that allow our customers and clients to look back and see that their businesses have moved on ...to a better place.

Our company is centred around three primary activities:

- R&D services aimed at improving the profitability of meat and seafood processing, with particular emphasis on the reduction of injury-related costs. These services are primarily focused on nationally significant problems requiring a coordinated industry effort to resolve.
- Strategic consulting services aimed at improving the profitability of meat, seafood and related processing industries via the development and implementation of national strategies, industry coordination and best practice.
- Developing and introducing effective solutions to productivity and injury-related problems i.e. solutions that will have a significant positive impact and add appreciable value to those who use them.
